DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Drawings

2. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

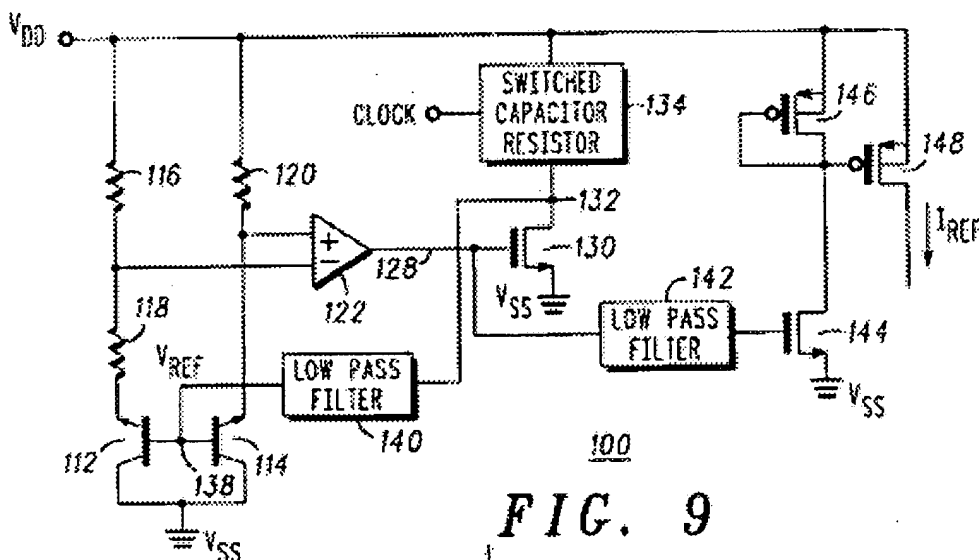

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2838

4. Claims 1-36 rejected under 35 U.S.C. 103(a) as being unpatentable over APA (Applicant's Prior Art) in view of Wadhwa et al. (USP 6,784,725). APA discloses the claimed invention (See figure 1 and the corresponding pages of the specification.) except for the use of a voltage follower/ voltage driving circuit that is coupled to a switched capacitor circuit. Wadhwa discloses that it is known in the art to provide the use of a voltage follower/ voltage driving circuit that is coupled to a switched capacitor circuit. See figure 9, below. The driver transistor, 130, is regulated by comparator, 128, to control the switched capacitor circuit, 134. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the use of a voltage follower/ voltage driving circuit that is coupled to a switched capacitor circuit of Wadhwa with the switched capacitor bandgap circuit of APA, in order to provide a low dependence on process, voltage and temperature.
